

ENVIRONMENTAL POLICY

It is GJK Facility Services' policy to comply with all Local, State and Federal legislation requirements concerning the environment and with procedures agreed to with each of our customers.

In demonstration, of the above commitment and as part of our continual improvement process in the contract cleaning industry, GJK Facility Services senior management team together with its employees, aims to ensure compliance through:

- disposal of different types of waste, eg. paper, waste water from cleaning equipment, in the specified environmentally acceptable manner
- recycling of waste, particularly paper
- use of environmentally friendly chemicals, their storage and disposal
- maintenance of equipment to keep air and noise pollution to a minimum. GJK Facility Services has always worked alongside its customers to meet the changing legal requirements in regard to protection of the environment. Upon commencement of a contract GJK Facility Services will liaise with the relevant authorities and the customer with a view to putting in place specific procedures for the site which will control:
 - the handling and disposal of waste
 - correct use, dilution, handling, storage and disposal of chemicals
 - maintenance of equipment.

These procedures, after being authorised by the customer as complying with environmental requirements would form a part of the basic training programmes to be presented to all management and cleaning staff concerned with the site.

Ongoing monitoring by GJK Facility Services Supervisors/Team Leaders would ensure strict adherence to the procedures set down and become a benchmark for continual improvement.
